DIGITAL LITERACY PROJECT REPORT

Course Code: CSE0001
Course Title: Digital Literacy
Name: Anirudh Agrawal
Registration Number: (25MEI10111)
Branch: Integrated M.Tech CSE (Cyber Security)
Year: 1st Year
Date: (29-03-2026)

Introduction

This project was assigned as part of the Digital Literacy course to help students understand how to use digital tools in a safe and professional manner. The objective of this project was to create a complete digital literacy portfolio that includes an infographic, professional online profiles, coding platform activity, email communication skills, and cybercrime awareness. Through this project, I learned how important digital literacy is for students in today's world. It is not only about using the internet but also about using it responsibly and professionally. This project also helped me understand how digital tools such as GitHub, LinkedIn, Google Forms, and coding platforms can support academic learning and career development. Overall, this project helped me improve my digital awareness and practical skills.

Task 1 Write-up – Digital Literacy Infographic

In Task 1, I created a digital literacy awareness infographic using Canva. The purpose of this infographic was to explain what digital literacy means and why it is important for students. In the infographic, I included topics such as safe internet practices, useful digital tools for students, and professional online presence. I tried to design the infographic in a simple and clear format so that other students can easily understand the information. I used icons, short points, and headings instead of long paragraphs to make the infographic more attractive and readable.

While creating the infographic, the most difficult part was selecting the most important information and arranging it in a proper layout. However, this task helped me understand how visual communication is more effective than writing long text. It also improved my creativity and taught me how to use online design tools in a better way. This task helped me understand the importance of digital literacy in student life.

Task 2 Write-up – Student Digital Portfolio

In Task 2, I created and updated my student digital portfolio using platforms such as GitHub and LinkedIn. These platforms are very useful for students because they help in building a professional digital presence. On GitHub, I created a repository and added a README file that includes my name, branch, and academic details. This helped me understand how GitHub is used to store and manage academic and technical work. On LinkedIn, I updated my education section and created a professional student profile.

Before completing this task, I did not realize how important it is to maintain a professional online profile. This task helped me understand how these platforms can help students get internships and career opportunities in the future. Over the next four years, I plan to continue using GitHub to upload my projects and improve my programming skills. I also plan to update my LinkedIn profile regularly and connect with other students and professionals. This task helped me understand the importance of digital identity and professional growth.

Task 3 Write-up – Coding Platform and Google Form

In Task 3, I explored coding practice platforms and Google Workspace tools. First, I created an account on a coding platform and completed a beginner-level coding challenge. This helped me understand how coding platforms are used to improve programming skills and logical thinking. It was interesting to see how students can practice coding problems and improve their knowledge step by step. This task also helped me understand the importance of regular coding practice.

In the second part of this task, I created a Google Form that can be used as a digital literacy awareness quiz for students. The form includes five questions related to digital literacy and online safety. I also learned how to share the form link and view responses in Google Sheets. This task helped me understand how online tools can be used for surveys, quizzes, and academic work. Overall, this task improved my confidence in using digital platforms and helped me learn new technical skills.

Task 4 Write-up – Email Etiquette and Communication

In Task 4, I learned about professional email writing and online communication. I wrote two professional emails: one email to a professor requesting an assignment extension and another email to an internship coordinator expressing interest in a summer internship. This task helped me understand the importance of using proper subject lines, greetings, and polite language in professional communication. I also created a social media Do's and Don'ts checklist that explains how students should behave responsibly on social media platforms.

This task helped me understand how poor communication can create problems in academic and professional situations. After completing this task, I learned how to write formal emails in a proper format and how to communicate more professionally. This task improved my communication skills and helped me understand the importance of digital etiquette.

Task 5 Write-up – Cybercrime Awareness

In Task 5, I learned about different types of cybercrime such as phishing and online payment fraud. What surprised me the most was how easily students can become victims of cybercrime just by clicking on a fake link or sharing an OTP. I also learned that college students are one of the main targets because they use the internet frequently for online payments and social media. This task helped me understand the importance of cyber awareness and safe online behaviour.

After completing this task, I decided that I will never share my personal or banking details with anyone online. I will also be more careful while clicking on unknown links and using online payment

applications. This task helped me become more aware of online threats and taught me how to stay safe on the internet.

Conclusion

This digital literacy project helped me understand the importance of using digital tools in a safe and professional way. Through different tasks, I learned how to create an infographic, build a digital portfolio, use coding platforms, write professional emails, and understand cybercrime awareness. This project also helped me improve my technical knowledge and communication skills. I learned how digital platforms can support academic learning and career development. Overall, this project was very useful and helped me become more confident in using digital tools responsibly and effectively.
